TISSUE SPECIFICITY: Detected in spleen, thymus, beart, and at lower levels in kidney and lung.
SIMILARITY: CONTAINS 1 THER-CYS REPEAT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MGI:1343050;

-I- FUNCTION: Receptor for TNFSF6/FASL. The adaptor molecule FADD recruits caspase-8 to the activated receptor. The resulting death inducing signaling complex (DISC) performs caspase-8 proteolytic activation which initiates the subsequent cascade of caspases (aspartate-specific cysteine proteases) mediating apoptosis. FAS-mediated apoptosis may have a role in the induction of peripheral reference in the antiqen-stimulated suicide of mature T-cells, (

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  177
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  126
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   281
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 228
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  78
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                18
induces the membrane-association of the kinase.
PTM: Phosphorylated on tyrosines in response to various stimuli that elevate the intracellular calcium concentration, as well a
                                              tyrosine phosphate.

SUBUNIT: Interacts with Crk-associated substrate (Cas), Nephrocystin and Grease regulator associated with PAK (Graf) SUBCELLULAR LOCATION: Cytoplasmic. Interaction with Nephrocys
                                                                                                            downstream signals that regulate neuronal activity. Interacts the SH2 domain of GrD2. May phosphorylate the voltage-gated potassium channel protein Kvl.2. Its activation is highly correlated with the stimulation of c-Jun N-terminal kinase activity (By similarity).

CATALYTIC ACTIVITY: ATP + a protein tyrosine - ADP + protein
                                                                                                                                                                                                                 FUNCTION: Involved in calcium induced regulation of ion channel and activation of the map kinase signaling pathway. May represent an important signaling intermediate between neuropeptide activated receptors or neurotransmitters that increase calcium flux and the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               by PRC activation. Recruitment by were adhesions initiates Tyr-402 phosphorylation. In monocytes, adhesions initiates Tyr-402 phosphorylation. In monocytes, adherence to substrata is required for tyrosine phosphorylation and L-alpha and kinase activation. Anglotensin II, thapsigargin and L-alpha Lysophosphatidic acid (LPA) also induce autophosphorylation and increase kinase activity (By similarity).

1. SUBUNIT: Isoform 1, but not isoform 2, interacts with Crk-associated substrate (Cas), Nephrocystin and GTPase regulator associated with FAK (Graf).

1. SUBCELULAR LOCATION: Cytoplasmic. Interaction with Nephrocystin induces the membrane-association of the kinase (By similarity).

1. Isoform 2 localizes to focal adhesions, but not isoforms 1 and 3.

1. ALTERNATIVE PRODUCTS: 3 isoforms; 1 (shown here), 2/PRNK and 3/PYK2s; are produced by alternative splicing.

1. TISSUE SPECIFICITY: Isoform 1 is expressed at high levels in the brain (hippocampus, cerebral cortex and olfactory bulb) and poorly in the spleen and other tissues, whereas isoforms 2 and 3 are expressed in the spleen and brain (highest in cereballum).

1. PTM: Phosphorylated on tyrosines in response to various stimulication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    adhesion kinase-related protein.";

                                                                                                                                                                                                                                                                                                                                                                                                                                               by PKC activation. Recruitment by Nephrocystin to ceil matrix adhesions initiates Tyr-402 phosphorylation (By similarity). I monocytes, adherence to substrata is required for tyrosine phosphorylation and kinase activation. Angiotensin II, thapsigargin and L-alpha-lysophosphatidic acid (LPA) also induautophosphorylation and increase kinase activity.

SIMILARITY: BELONGS TO THE TYR FAMILY OF PROTEIN KINASES. FAK

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            X., Hunter D., Morris J., Haskill calcium-dependent tyrosine kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nephrocystin and GTPase regulator associated with FAK (Graf).
SUBCELLULAR LOCATION: Cytoplasmic. Interaction with Nephrocystin induces the membrane-association of the kinase.
ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; are produced by alternative splicing.
TISSUE SPECIFICITY: Most abundant in the brain, with highest levels in amygdala and hippocampus. Low levels in kidney. Also expressed in spleen and lumnhorwer.
                                                                                                                                                                                                                                                                                                                                                               expressed in spleen and lymphocytes.

PTM: Phosphorylated on tyrosines in response to various stimul that elevate the intracellular calcium concentration, as well by PKC activation. Recruitment by Nephrocystin to cell matrix adhesions initiates Tyr-402 phosphorylation. In monocytes, adherence to substrata is required for tyrosine phosphorylatio and kinase activation. Angiotensin II, thapsigargin and L-alph lysophosphatidic acid (LPA) also induce autophosphorylation and increase kinase activity (By similarity). SIMILARITY: BELONGS TO THE TYR FAMILY OF PROTEIN KINASES. FAK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   downstream signals that regulate neuronal activity. Interacts the SH2 domain of Grb2. May phosphorylate the voltage-gated potassium channel protein Kv1.2. Its activation is highly correlated with the stimulation of c-Jun N-terminal kinase activity. ACTIVITY: ATP + a protein tyrosine = ADP + protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      tyrosine phosphate. SUBUNIT: Interacts with Crk-associated substrate
